Errors	Amount
1 incorrect page found in sitemap.xml **About this issue:** A sitemap.xml file makes it easier for crawlers to discover the pages on your website. Only good pages intended for your visitors should be included in your sitemap.xml file. This error is triggered if your sitemap.xml contains URLs that: - lead to webpages with the same content - redirect to a different webpage - return non-200 status code Populating your file with such URLs will confuse search engines, cause unnecessary crawling or may even result in your sitemap being rejected. **How to fix:** Review your sitemap.xml for any redirected, non-canonical or non-200 URLs. Provide the final destination URLs that are canonical and return a 200 status code.	1 0
0 pages returned 5XX status code	0 0
0 pages returned 4XX status code	0 0
0 pages don't have title tags	0 0

Warnings

Warnings

Project name: ui.guardianpubs.com

Warnings	Amount
542 URLs with a temporary redirect **About this issue:** Temporary redirects (i.e., a 302 and a 307 redirect) mean that a page has been temporarily moved to a new location. Search engines will continue to index the redirected page, and no link juice or traffic is passed to the new page, which is why temporary redirects can damage your search rankings if used by mistake. **How to fix:** Review all URLs to make sure the use of 302 and 307 redirects is justified. If so, don't forget to remove them when they are no longer needed. However, if you permanently move any page, replace a 302/307 redirect with a 301/308 one.	542 0
542 pages have low text-HTML ratio **About this issue:** Your text to HTML ratio indicates the amount of actual text you have on your webpage compared to the amount of code. This issue is triggered when your text to HTML is 10% or less. Search engines have begun focusing on pages that contain more content. That's why a higher text to HTML ratio means your page has a better chance of getting a good position in search results. Less code increases your page's load speed and also helps your rankings. It also helps search engine robots crawl your website faster. **How to fix:** Split your webpage's text content and code into separate files and compare their size. If the size of your code file exceeds the size of the text file, review your page's HTML code and consider optimizing its structure and removing embedded scripts and styles.	542 0
291 pages don't have an h1 heading **About this issue:** While less important than <title> tags, h1 headings still help define your page's topic for search engines and users. If an <h1 tag is empty or missing, search engines may place your page lower than they would otherwise. Besides, a lack of an <h1 tag breaks your page's heading hierarchy, which is not SEO friendly. **How to fix:** Provide a concise, relevant h1 heading for each of your page.	291 0

Warnings	Amount
36 external links are broken **About this issue:** Broken external links lead users from one website to another and bring them to non-existent webpages. Multiple broken links negatively affect user experience and may worsen your search engine rankings because crawlers may think that your website is poorly maintained or coded. Please note that our crawler may detect a working link as broken. Generally, this happens if the server hosting the website you're referring to blocks our crawler from accessing this website. **How to fix:** Please follow all links reported as broken. If a target webpage returns an error, remove the link leading to the error page or replace it with another resource. If the links reported as broken do work when accessed with a browser, you should contact the website's owner and inform them about the issue.	36 0
17 pages have underscores in the URL **About this issue:** When it comes to URL structure, using underscores as word separators is not recommended because search engines may not interpret them correctly and may consider them to be a part of a word. Using hyphens instead of underscores makes it easier for search engines to understand what your page is about. Although using underscores doesn't have a huge impact on webpage visibility, it decreases your page's chances of appearing in search results, as opposed to when hyphens are used. For more information, please see this Google article **How to fix:** Replace underscores with hyphens. However, if your page ranks well, we do not recommend that you do this.	17 0
6 pages have too much text within the title tags **About this issue:** Most search engines truncate titles containing more than 70 characters. Incomplete and shortened titles look unappealing to users and won't entice them to click on your page. For more information, please see this Google article **How to fix:** Try to rewrite your page titles to be 70 characters or less.	6 0

Warnings	Amount
5 external images are broken **About this issue:** A broken external image is an image that can't be displayed because it no longer exists or because its URL is misspelled. Having too many broken external images negatively affects user experience and may be a signal to search engines that your website is poorly coded or maintained. **How to fix:** To fix a broken external image, perform one of the following: If an image was deleted or damaged, replace it with a new one If an image is no longer needed, simply remove it from your page's code If an image moved to a different location and you know its new address, change its URL	5 0
0 links on HTTPS pages lead to HTTP page	0 0
0 pages don't have enough text within the title tags	0 0
0 pages have duplicate H1 and title tags	0 0
0 pages don't have meta descriptions	0 0
0 pages have too many on-page links	0 0
0 images don't have alt attributes	0 0
0 pages have too many parameters in their URLs	0 0

Project name: ui.guardianpubs.com

Notices	Amount
322 links on this page have no anchor text **About this issue:** The issue is triggered if a link (external or internal) on your site has an empty or naked anchor (i.e., just a URL , or anchor text only contains special characters. This issue makes it difficult for the crawlers to understand what the page is about and affects the performance of the linked-to page in search results. **How to fix:** Use anchor text for your links where it is necessary. The link text must give users and search engines at least a basic idea of what the target page is about. Also, use short but descriptive text. Learn more	322 0
175 pages have more than one H1 tag **About this issue:** Although multiple <h1 tags are allowed in HTML5, we still do not recommend that you use more than one <h1 tag per page. Including multiple <h1 tags may confuse users. **How to fix:** Use multiple <h2>-<h6 tags instead of an <h1 .	175 0
63 pages require content optimization **About this issue:** Content optimization enhances on-page clarity, improves user engagement, snippet eligibility, and topical authority. It's especially important for pages with a lot of content. **How to fix:** Follow the advice provided in the error details for each page. Improve your content with AI using the Content Optimizer tool.	63 0

Notices	Amount
42 orphaned pages in sitemaps **About this issue:** An orphaned page is a webpage that is not linked to internally. Including orphaned pages in your sitemap.xml files is considered to be a bad practice, as these pages will be crawled by search engines. Crawling outdated orphaned pages will waste your crawl budget. If an orphaned page in your sitemap.xml file has valuable content, we recommend that you link to it internally. **How to fix:** Review all orphaned pages in your sitemap.xml files and do either of the following: If a page is no longer needed, remove it If a page has valuable content and brings traffic to your website, link to it from another page on your website If a page serves a specific need and requires no internal linking, leave it as is	42 0
27 pages have only one incoming internal link **About this issue:** Having few incoming internal links means little to no visits or chances of being placed in search results. **How to fix:** Add more incoming internal links to pages with important content.	27 0
8 pages need more than 3 clicks to be reached **About this issue:** A page's crawl depth is the number of clicks required for users and search engine crawlers to reach it via its corresponding homepage. From an SEO perspective, an excessive crawl depth may pose a great threat to your optimization efforts, as both crawlers and users are less likely to reach deep pages. For this reason, pages that contain important content should be no more than 3 clicks away from your homepage. **How to fix:** Make sure that pages with important content can be reached within a few clicks. If any of them are buried too deep in your site, consider changing your internal link architecture.	8 0
1 subdomain doesn't support HSTS **About this issue:** HTTP Strict Transport Security HSTS informs web browsers that they can communicate with servers only through HTTPS connections. So, to ensure that you don't serve unsecured content to your audience, we recommend that you implement HSTS support. **How to fix:** Use a server that supports HSTS.	1 0

Notices	Amount
Llms.txt has formatting issues **About this issue:** If your llms.txt file is incorrectly formatted, AI search engines that use it may interpret your website's content less accurately. **How to fix:** Review your llms.txt file and fix all issues. Visit llmstxt.org to find out how to properly format your file.	1 0
1 page has low semantic HTML usage **About this issue:** The ratio of semantic HTML tags to other HTML tags is low. Semantic HTML adds structure to content and improves indexing accuracy, helping search engines better understand page hierarchy and key information. **How to fix:** Make sure your content is well organized and use the most common semantic HTML. Learn more	1 0

Detailed Issue: Errors

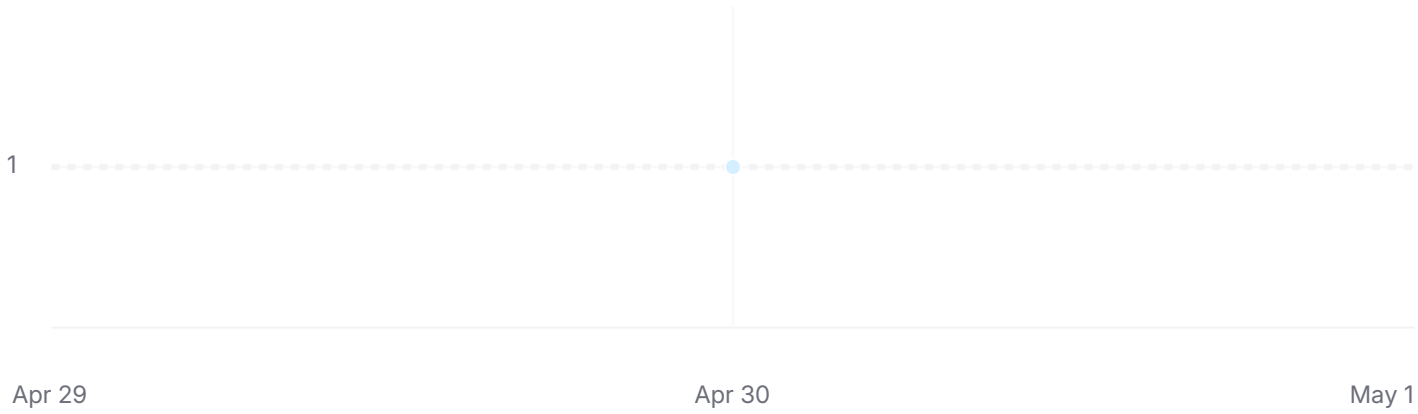

Detailed Errors

Incorrect pages found in sitemap.xml

Project name: ui.guardianpubs.com

Detailed Issue Description

About this issue:
A sitemap.xml file makes it easier for crawlers to discover the pages on your website. Only good pages intended for your visitors should be included in your sitemap.xml file.
This error is triggered if your sitemap.xml contains URLs that:
- lead to webpages with the same content
- redirect to a different webpage
- return non-200 status code
Populating your file with such URLs will confuse search engines, cause unnecessary crawling or may even result in your sitemap being rejected.
How to fix:
Review your sitemap.xml for any redirected, non-canonical or non-200 URLs. Provide the final destination URLs that are canonical and return a 200 status code.

Low text to HTML ratio

Detailed Issue Description

About this issue:
Your text to HTML ratio indicates the amount of actual text you have on your webpage compared to the amount of code. This issue is triggered when your text to HTML is 10% or less.
Search engines have begun focusing on pages that contain more content. That's why a higher text to HTML ratio means your page has a better chance of getting a good position in search results.
Less code increases your page's load speed and also helps your rankings. It also helps search engine robots crawl your website faster.
How to fix:
Split your webpage's text content and code into separate files and compare their size. If the size of your

code file exceeds the size of the text file, review your page's HTML code and consider optimizing its structure and removing embedded scripts and styles.

Only the first 50 rows are shown in reports. To view the full table, export it as a CSV or Excel file from Site Audit.

Missing h1

Detailed Issue Description

About this issue:
While less important than <title> tags, h1 headings still help define your page's topic for search engines and users. If an <h1 tag is empty or missing, search engines may place your page lower than they would otherwise. Besides, a lack of an <h1 tag breaks your page's heading hierarchy, which is not SEO friendly.
How to fix:
Provide a concise, relevant h1 heading for each of your page.

Only the first 50 rows are shown in reports. To view the full table, export it as a CSV or Excel file from Site Audit.

Broken external links

Detailed Issue Description

About this issue:
Broken external links lead users from one website to another and bring them to non-existent webpages. Multiple broken links negatively affect user experience and may worsen your search engine rankings because crawlers may think that your website is poorly maintained or coded.
Please note that our crawler may detect a working link as broken. Generally, this happens if the server hosting the website you're referring to blocks our crawler from accessing this website.
How to fix:
Please follow all links reported as broken. If a target webpage returns an error, remove the link leading to the error page or replace it with another resource.
If the links reported as broken do work when accessed with a browser, you should contact the website's owner and inform them about the issue.

Underscores in URL

Detailed Issue Description

About this issue:
When it comes to URL structure, using underscores as word separators is not recommended because search engines may not interpret them correctly and may consider them to be a part of a word. Using hyphens instead of underscores makes it easier for search engines to understand what your page is

about.
Although using underscores doesn't have a huge impact on webpage visibility, it decreases your page's chances of appearing in search results, as opposed to when hyphens are used.
For more information, please see this Google article
How to fix:
Replace underscores with hyphens. However, if your page ranks well, we do not recommend that you do t his.
